

# UTM-1 Appliances

## All inclusive. All secured.

### OVERVIEW

**UTM-1™** appliances offer the ideal combination of proven security technologies and easy-to-use deployment and management features. With a full line of hardware-based solutions, Check Point UTM-1 appliances consolidate key security applications such as firewall, VPN, intrusion prevention, and antivirus and more into a single, easy-to-manage solution. UTM-1 Appliances are based on the Check Point Software Blade Architecture that enables flexible and fast deployment of additional security capabilities, such as VoIP protections, without the addition of new hardware.

**UTM-1** appliances deliver a comprehensive set of security features including firewall, intrusion prevention, antivirus, anti-spyware, anti-spam, Web filtering, Web application security—as well as secure site-to-site and remote access connectivity. **UTM-1 Edge™** family of appliances deliver integrated firewall, intrusion prevention, VPN, and antivirus for branch offices of up to 100 users, ensuring small offices stay as secure as the corporate office.

#### BENEFITS

- Industry-leading application- and network-layer firewall
- Site-to-site and remote-access VPNs
- Gateway antivirus and anti-spyware
- Intrusion prevention with type-based protections and security updates
- Web security with URL filtering and integrated security for Web applications
- Email security and anti-spam, including the Check Point six dimensions of comprehensive messaging security
- Software Blade Architecture for fast and flexible deployment of new security services

**UTM-1** appliances come in six models and **UTM-1 Edge** family of appliances consists of X-Series and N-Series models. UTM-1 Edge X-Series appliances come in four models and UTM-1 Edge N-Series appliances come in two models that let organizations choose the right solution to meet price and performance requirements.
